This chart gives general guide lines only on the chemical resistance of plastics. There are many factors which influence chemical resistance. Always test for your own application before selecting the appropriate product.

## Introduction

The Dynalon catalog technical section aims to provide clear, concise information about the key polymers from which our ranges are manufactured. It is intended as your guide to the suitability of our products for use with a variety of chemical groups, and in a variety of environments.

Each polymer has its own entry with detailed technical information and a summary icon denoting its general chemical suitability characteristics. Those Polymers capable of being repeatedly Autoclaved at, at least $121^{\circ} \mathrm{C}$ for 30 minutes are denoted by the letter A, more detailed temperature resistance is often included in the text.

The information within this section is designed to answer most common application questions but like any guide will not answer all. Dynalon's Technical Department will be pleased to answer any question relating to product usage.

522085 Polypropylene Series

522095 Polymethylpentene Series
"Square Ratio" Design Printed Polypropylene and Polymethylpentene Beakers*

- Shatter resistant - reduce breakage \& incidence of injury!
- Choose glass-like clarity of polymethylpentene (PMP) or
- Chemically resistant to most acids, bases and many common solvents
- Choose economical translucent polypropylene (PP)
- Autoclavable

Square ratio beakers are the safe, convenient alternative to griffin style beakers. These beakers feature a vertical lip around the top of the beaker which serves two purposes: first the lip contains many spills that may occur with the rounded design of a griffin style beaker. Second, this vertical lip allows the beakers to be stacked together in sets when not in use. Maximum temperature for PP is $135^{\circ} \mathrm{C} ; \mathrm{PMP}$ is $150^{\circ} \mathrm{C}$ to $180^{\circ} \mathrm{C}$ for short intervals.

Dispenser Bottle with Adjustable Volume LDPE/PMP*

- LDPE bottle with PMP dispenser

The graduated clear PMP measuring cup slides up and down on the vertical polyethylene tube for easy adjustment. The variation in height determines the volume to be dispensed. The cup is filled by squeezing the bottle and forcing the liquid up the tube. When the bottle pressure is released, the excess will be drawn back into the bottle and only the desired volume will remain.

Both natural and white lids, all sizes, are made of LLDPE. Linear Low Density Polyethylene is tough like LDPE and a bit more rigid like HDPE, thereby allowing for a tight fitting lid. Recycling code is 4. Designed to simplify and standardize the handling and storage of specimens. The containers are inert and cannot be attacked by formaldehyde or weak acids or bases. Will resist freezing or boiling. They have long shelf lives and are easily disposable. Sturdy enough for reuse. Easy to store, requires little space. Price includes container with lid.

## SEE cylinder drying racks on page 32

- Squat design for increased stability on the bench and ease of handling particularly in restricted spaces
- Self-draining base eliminates water collection during washing in an automatic lab washing machine - thereby removing all spill re-wetting and contamination issues
- Clear molded blue over-printed graduations - always visible
- High clarity polypropylene - safe, unbreakable with good chemical and temperature resistance
- Anti suction base - no problems when working on wet surfaces
- Space saving storage with low form cylinder design

The squat design makes these translucent polypropylene products more stable on the bench than traditional glass or plastic cylinders and results in fewer spills or more serious accidents. They are easier to handle, particularly in confined spaces such as fume hoods. The lower form means you require less overhead storage space. Not only are the graduations molded into the product, but they are also overprinted in attractive Azlon blue ink. And these cylinders have a unique self draining base that will allow wastewater to drain when inverted in a dishwasher.

Petri Dishes* - now available in sleeves of 20 each!

- Manufactured under strict aseptic conditions
- Dishes available standard and colored

All Sterilin petri dishes are manufactured under strict aseptic conditions within a Class J clean room which complies with BS 5295. Petri dishes remain under clean room conditions throughout the manufacturing process. An in-house microbiology laboratory performs all the necessary testing, including that of sterility.

100mm Petri dishes conform to BS 611 Part II, which involves stringent control of rigidity, thermal resistance, stackability and dimensional consistency. The dimensional consistency of these dishes makes them the first choice for use with automatic plate pourers.

Sturdy polyethylene sleeves which exceed BS611 Part II are used to pack all Petri dishes. An inner liner compartments the carton and ensures that Petri dishes arrive in perfect condition. All cardboard used is of recycled grade.

Disposable Pipettes PS* - now available in packs!
Sterilin

- Sterility guaranteed by gamma irradiation
- Excellent accuracy, better than $\pm /-1 \%$
- Crystal grade polystyrene for improved clarity
- Easy-open color-coded tear strips
- Ascending and descending graduations for accurate pipetting
- Drawn tips allow every drop to drain freely
- Special products manufactured to customer specifications

Crystal grade polystyrene is used for consistency in manufacture and maximum clarity, with easy to read crisp black printed graduations enabling the pipettes to be used accurately to $+/-1 \%$. Sterility is guaranteed by gamma radiation at a license holding irradiation plant, which follows the relevant recommendations in the DHSS Guide to Good Manufacturing Practice for Sterile Medical Devices and Surgical Products. Sterilin pipettes are tested for pyrogencity, and have a pyrogen level of less than $0.25 \mathrm{EU} / \mathrm{ml}$. ALI below pipettes are individually wrapped.

One piece droppers are particularly useful for all applications where the risk of infection or toxicity prohibits mouth pipetting. Graduated to give an indication of the amount of liquid being drawn. Extremely easy-touse bellows-shaped leakproof bulb provides excellent drop formation.

## Water Still - Wipes

The results at right confirm that the distilled water from our Merit Water Still conforms to Grade 3 water as detailed in ISO 1696: 1987.
*pH, conductivity and sensitivity are affected by temperature and the presence of absorbed carbon dioxide. The basis of the tests is $20^{\circ} \mathrm{C}$ on distilled water free of carbon dioxide.
**Care is needed to obtain Pyrogen-free water, and the distillate must be tested before use.

## Water Still, Merit

- Economical Price
- Glass construction with long life metal heating element
- Two independent safety thermostats
- Wall mountable

The Merit is the ideal choice for budget conscious laboratories that can't afford to compromise on quality. It combines economy and high performance with a host of other features which comparable stills cannot match. Built in acid addition funnel and drain stopcock allow easy descaling without dismantling the glassware.

The unique condenser design ensures that the droplets of distilled water remain in contact with the cooling coil for the longest possible time producing cold distilled water and pre-heating the boiler feed to increase efficiency. Screw threads are incorporated on all water connections so hoses can be fitted and removed easily and safely without risk of breakage. Safety features include two independent safety thermostats to prevent over heating in the event of failure of the water supply. The stand is pre-drilled to facilitate wall mounting.
